

Halt the Assault

Save Our Water
Save Our Health

Shut Down Fermi 2 - NO NEW NUKES

Nuclear energy is not a safe or clean energy option. Fermi 2 is a faulty and dangerous Nuclear Reactor that sits on the shore of Lake Erie and puts our health and our Great Lakes (20% of the world's freshwater) at serious risk. It is the same reactor design and model that had a major meltdown in Fukushima, Japan.

The Fermi 2 Nuclear Reactor:

- Discharges 45 million gallons of wastewater into Lake Erie daily!
- Dramatically increases cancer rates in the surrounding population (see this study)
- Charges taxpayers to store waste that will take thousands of years to become safe

If you are reading this, you are in the 50-mile evacuation zone and these issues directly affect you, your family, your community, and your earth.

Brought to you by CRAFT - Citizens Resistance at Fermi Two
An Indigenous-led Water Protecting Grassroots Organization -
Ushering in an accessible, fair, and just energy future for all.
